Undergraduate Artificial Intelligence Society (UAIS)

Sponsorship Prospectus

2026-2027

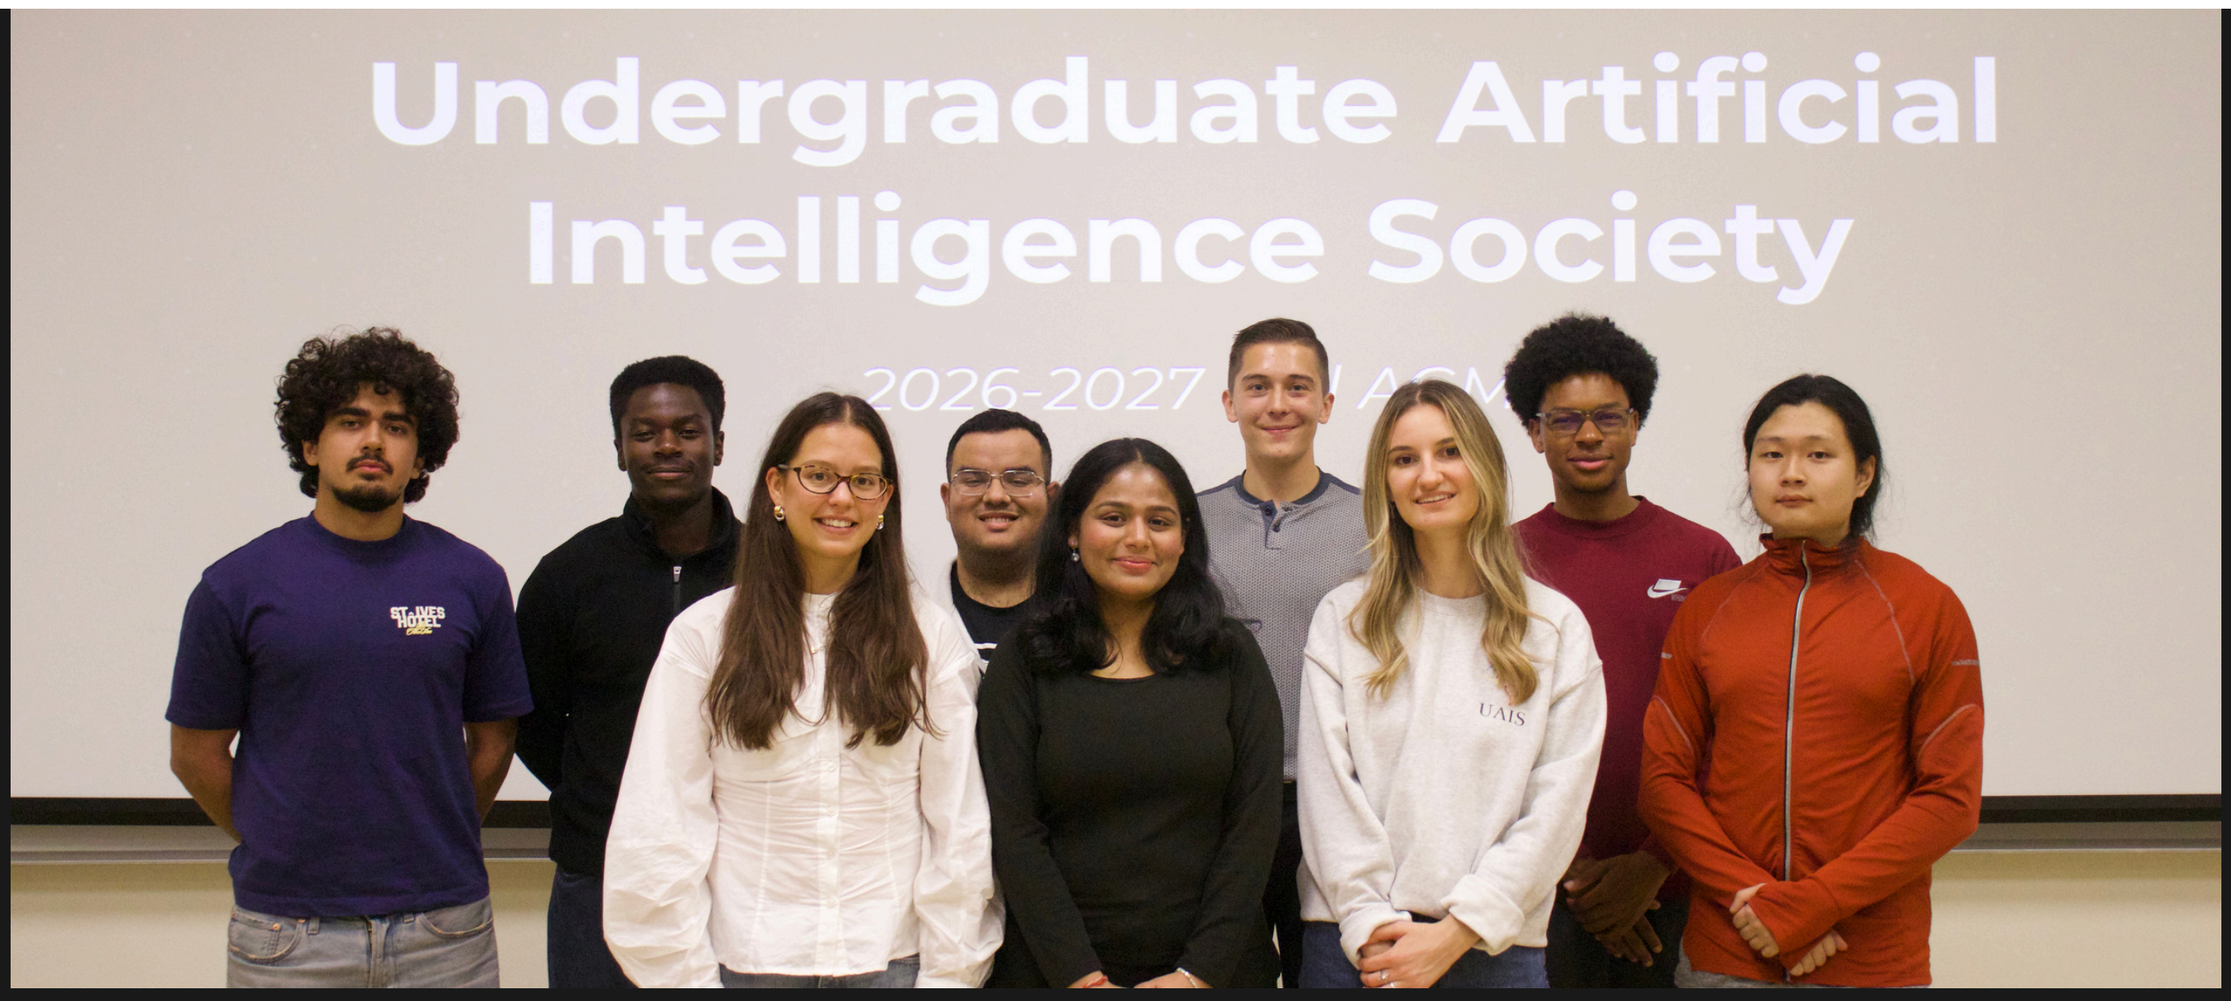
WHAT IS UAIS?

The University of Alberta Undergraduate Artificial Intelligence Society (UAIS) is a vibrant student community passionate about exploring, learning, and applying AI in meaningful ways.

From foundational concepts to cutting-edge techniques, **we bring undergraduates together to engage with - and create - the future of artificial intelligence.**

We provide:

- A welcoming community for students of all backgrounds
- Workshops, guest lectures, and hands-on projects
- Opportunities to demystify AI and build practical skills
- A culture of curiosity, creativity, and collaboration



Mission & Values

Mission: Our mission is to demystify artificial intelligence for undergraduates by providing accessible education, hands-on projects, and a supportive community to foster learning and innovation in AI.

Learning: We are committed to guiding students with aspirations in the AI field through the use of workshops and hands-on projects. Our aim is to provide practical and theoretical knowledge that empowers our members to excel in AI.

Community: We provide students with an Interest In AI with a safe space community to communicate, collaborate, and learn with other likeminded AI enthusiasts in the University space.

Innovation: We value a spirit of curiosity and innovation, encouraging students to explore new ideas and push the boundaries of what is possible with AI.

Sponsor Tiers & Benefits

Supporting the future of AI

	GOLD TIER *$750*	SILVER TIER *$500*
Brand Visibility At Events	Speaking Presence Available + Silver	Sponsor Slides on Presentation
Social Media & Newsletter Shoutouts	Prominent Display on Posts + Individual Social media spotlight post + Silver	Display in Corner of Posts and Description Mention
Workshop Sponsorship	Host a workshop or AMA session with **full branding and promotion.** Individual “Industry Insight” sessions + Silver	Sponsor shoutout during Workshop and in Slides.
UAIS Website Presence	Logo + description and link to company website + Silver	Logo + Name featured on the UAIS sponsor page.
Discord Promotions	Recognition in our **900+ member Discord** through pinned posts and announcements.	✗
Customized Benefits	**Flexible** options tailored to sponsor goals (e.g. recruitment events, workshops).	✗

Every contribution directly supports student-led AI education — from covering event logistics and guest speaker honoraria to ensuring accessibility for all students.

Our sponsors are not just supporting a club, but investing in the next generation of AI talent.

(event specific)

Hackathon Sponsorship

The UAIS Hackathon 2026 is a two-day, in-person student hackathon bringing together 100–150 students from across the University of Alberta to build AI-powered projects in a fast, focused, collaborative environment.

	GOLD TIER *$500*	SILVER TIER *$200*
Highlight during opening remarks	Brief opening talk with dedicated slide	Sponsor logo on Presentation
Social media representation	Prominent Display on Posts + Individual Social media spotlight post + Silver	Display in Corner of Posts and Description Mention
Judges & Mentors	Upto 2 mentors and 2 judges for the sponsored stream	1 mentor and 1 judge for the sponsored stream
Workshop Sponsorship	Host a 20-minute talk or 45-minute hands-on workshop slot during the event	Host a 20-minute talk during the event
Tabling	Reserved table in the main event space for the full duration (recruitment/demo)	✗
Dedicated Sponsor Award	Named award (e.g., "X Best Project") presented at closing ceremony, with sponsor on stage	✗

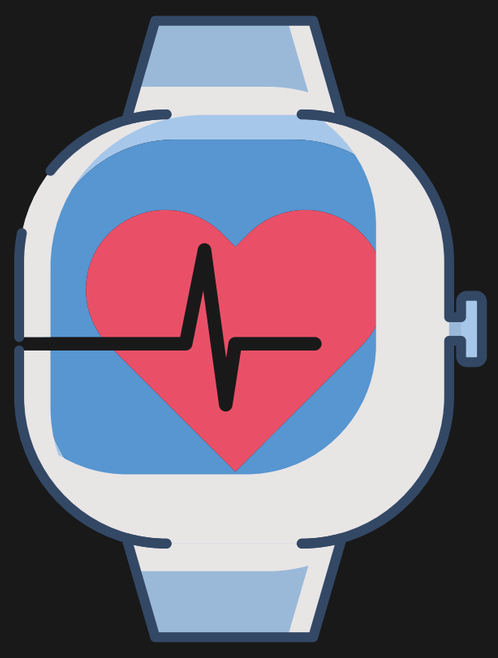
Club Projects

2026-2027 Academic Year

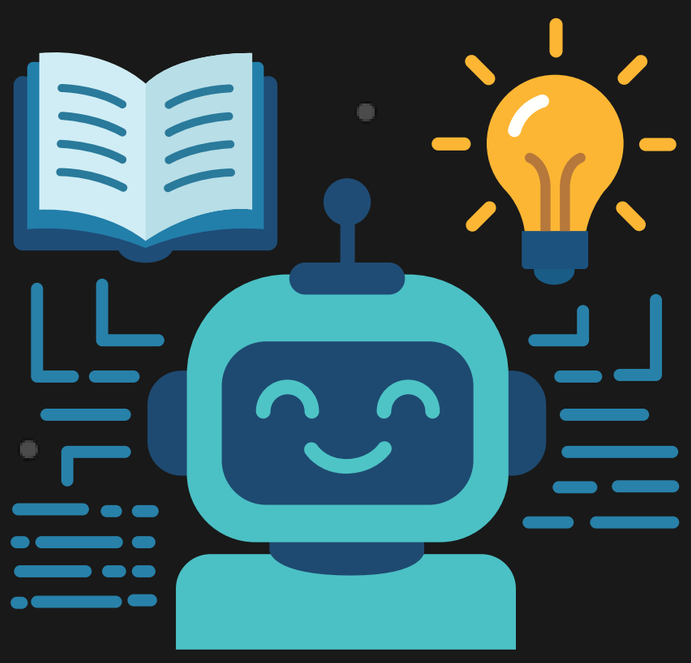


rPPGfor contactless vital sign monitoring

Estimating heart rate, heart rate variability, and respiration rate in real time from webcam video, with an emphasis on algorithm robustness across lighting conditions and skin tones.

Foundations of Deep Learning Reading Club.

The goal is to build a basic understanding of the modern deep learning paradigm by going through some influential papers.



Root AI: A Node-Based Learning Companion

A learning tool that asks you to explain concepts instead of quizzing you, because you don't really know something until you can teach it.

Club Projects

2026-2027 Academic Year

Dataspace

A Google Drive–style platform for datasets, with an AI agent pipeline that builds statistics, aggregations, and tailored responses from your data.

Failure Forensics

A tool that gathers logs, metrics, and model outputs in one place to explain why an AI pipeline failed and how to fix it.

Wi-Fi Biosensing for Sleep Health Monitoring

Using ordinary Wi-Fi signals to detect breathing, movement, and sleep states — no wearable required.

Club Projects

2026-2027 Academic Year

CalendarAI: An Intelligent Academic Organizer

Upload your syllabus, and CalendarAI extracts every deadline and builds your semester calendar automatically.

Nexus OS

An AI-Native Desktop Shell, an experimental desktop environment minatureized, where an AI agent acts as a first-class interaction layer, using structured tool calls plus gesture recognition

Multi-Agent Soccer AI

Multi-agent reinforcement learning project that trains AI agents to play increasingly complex games

Content Creator Ops Platform

AI Powered tool that turns long-form videos into captioned ready to post short clips

Flagship Project Highlight

Project: *2025-2026 & 2024-2025*

AI Investment Partnership

UAIS x The University of Alberta Innovation Fund: AI Due Diligence for Startup Investment

In collaboration with the University of Alberta Innovation Fund (UAFund), UAIS students are contributing to the AI Due Diligence process for **real startups seeking investment.** This unique partnership gives our members the opportunity to assess whether companies are meaningfully applying AI — not just using buzzwords.

UAIS evaluates 1–2 startups per quarter, helping the UAFund's AI advisors and investment committee identify strong technical foundations, business viability, and ethical use of AI. Students gain hands-on experience in:

- Startup assessment and AI research
- Professional reporting and venture capital workflows
- Networking with mentors, founders, and former Google DeepMind researchers

This project is a standout opportunity for students to explore the intersection of AI, investment, and innovation, while building industry-grade evaluation skills. All work is carried out under confidentiality and in close coordination with UAFund staff.

Past Club Projects Highlight

2025-2026 Academic Year

Gesture-Controlled Laptop Automation – AI for Accessibility

This initiative bridges computer vision and real-world interaction. By using webcam-based hand gesture recognition, students will create a tool that maps common gestures (e.g., swiping, pinching, pointing) to OS-level actions like volume control, screen lock, or tab switching. Leveraging OpenCV, MediaPipe, and PyAutoGUI, this project focuses on accessibility, productivity, and real-time ML interaction.

Lecture Notes Chatbot – AI-Powered Academic Assistant

This project introduces new students to applied NLP by building a Retrieval-Augmented Generation (RAG) chatbot that helps peers review their own lecture notes. Users can upload PDFs and ask natural-language questions, and the chatbot returns simplified explanations, summaries, or answers based on the material.

Designed to support academic understanding, productivity, and AI literacy, this tool leverages OpenAI APIs, vector search, and PDF parsing to personalize learning — all while teaching foundational AI skills in an approachable way.

Past Club Projects Cont.

2025-2026 Academic Year

AI Due Diligence Investment Analysis

Step into the world of venture capital alongside the UofA Innovation Fund's investment team, working with leading AI experts from across the university on a critical mission: separating real AI innovation from marketing hype. Together, we combine rigorous technical analysis with market data and qualitative judgment to build a complete map of an early-stage startup. This final report is consequential, informing how the Fund deploys its $10M in capital and shaping the future of tech in Alberta.

Crypto Adoption Forecasting with AI

This project explores how macroeconomic stressors like inflation, unemployment, or interest rates impact cryptocurrency adoption. Students will combine macroeconomic indicators with blockchain usage data to forecast trends and visualize connections.

Past Club Projects Cont.

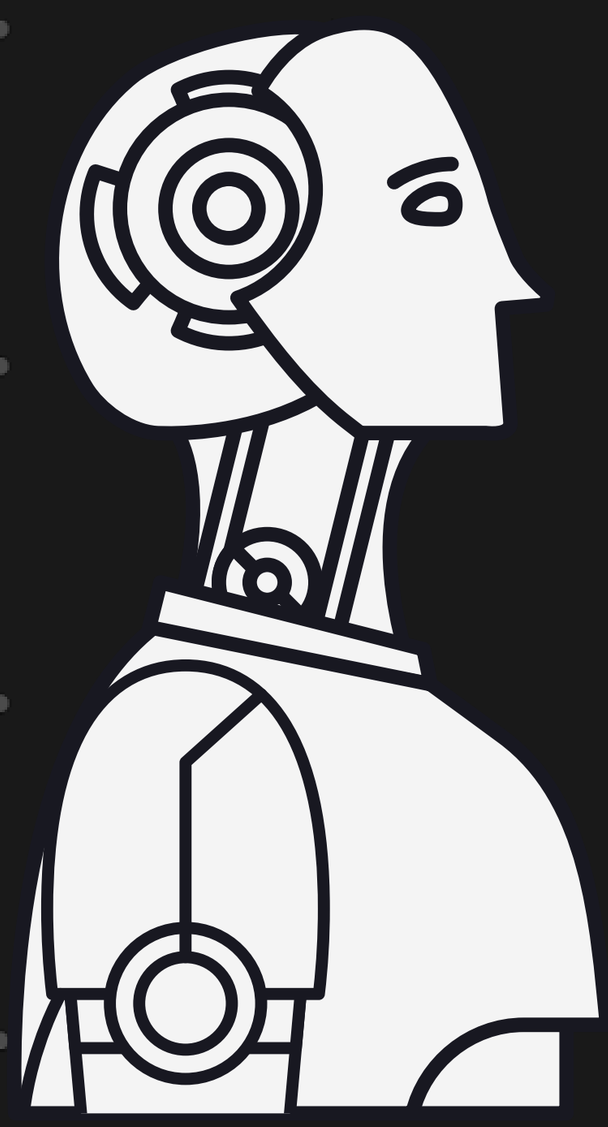
2025-2026 Academic Year

Speech-Based Alzheimer AI Screening Tool

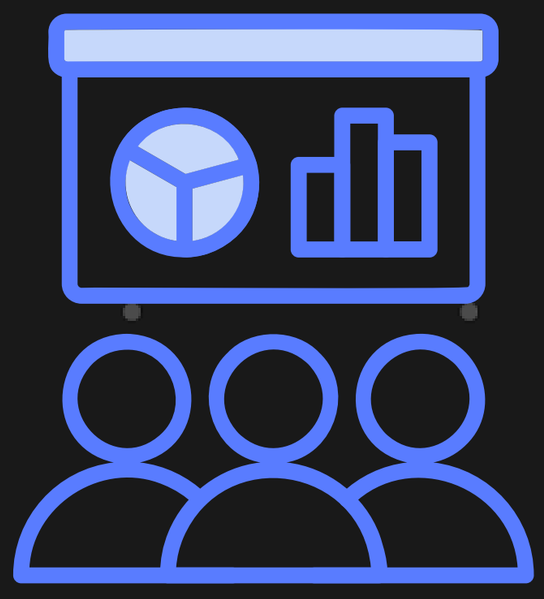
This project aims to develop a web or mobile app that allows users to record short speech samples. The backend will process the speech with a fine-tuned BERT-family model to estimate Alzheimer's prediction scores - this is not a diagnosis. The fine-tuned BERT model based on the project lead's published research. The tool emphasizes accessibility, affordability, and ethical AI usage.

ClubMate AI: Open-Source Assistant for Student Clubs

ClubMate AI is a Discord bot that reduces administrative workload for student clubs. Using LangChain and the Model Context Protocol, it integrates with Google Calendar, Google Sheets, Git Hub, Notion, and Obsidian to automate scheduling, room booking, and other tasks.



2026/2027 Plans



10 Workshops + Presentations

***Sponsors have the opportunity to host workshops alongside UAIS**, gaining visibility as thought leaders while engaging directly with students.*

10+ Guest Speakers

***Workshops and presentations can also be delivered in partnership with our sponsors,** tailored to highlight industry perspectives.*
